### Lessons This Week

The students created PowerPoint presentations on different types of bridges around the world. They also have started building their toothpick bridges this week. The students researched different types of bridges, sketched out their ideas, and have begun putting them together. In addition to the engineering skills this project also provides the important practice of working with a partner. Our geometry lesson was on different types of angles. They learned about whole, straight, acute, obtuse, right, and reflex angles. They used a protractor to measure and draw different angles.

The students had a book report assignment that involved a written and tasty component. They had to bring in a food that somehow related to the book they read. We enjoyed a buffet of cookies, cupcakes, gingerbread houses, gummy worms, popcorn, ice cream, donuts, fried chicken, chips and salsa, and Doritos.
