We had lessons on angles this week. The students learned how to use a protractor to measure and draw angles. Our math lesson this week introduced the students to coordinate graphing. They learned about the four quadrants, x and y axis, and the origin point. They are able to list the coordinates of a given point and plot a location of given coordinates. The toothpick bridges are coming along. This is a great lesson in working with a partner, and some of the students are discovering that sometimes you need to re-think the design and make changes through trial and error. One of our reading comprehensions this week was about Julius Caesar and the end of the Roman Republic.

Important Date
Toothpick Bridge Competition
Feb. 29th at UTC
More information is available at

The students were working together on vocabulary card work with words from the novel, Iqbal.

The beginning of a great bridge!
