This week we learned about the basic geometric concepts that make up our environment of point, line, and plane. They looked at examples and learned the Latin meaning of the words. Our science lessons have been about Earth Science and this week we covered winds and air currents. We used a convection chimney to show air current and how hot air rises and cooler air sinks. The students have also been using a sling psychrometer to take daily readings of the relative humidity outside.

**Camping Trip**

Please send in your camping permission form and payment. Waivers must be completed online. Check out our website, Level3678.com for the packing list and link to the waiver.
