This week the students used prior knowledge of Greek Gods to match them with Roman Gods. We also had a lesson on gifts from Ancient Civilizations. These are things that were invented thousands of years ago that we still use today. Students researched more ancient inventions to create additional card material for our classroom. They also experimented with base 3 and other bases. One of their writing lessons this week was about devising a topic sentence and supporting detail sentences to write a paragraph. Our geometry lesson included the etymology and shapes of regular polygons.

Oct. 14 is listed on the school calendar as a conference day. Our conferences will be in November after the students finish their first work cycle.
