

6th Grade News

September 4, 2020

This week we officially started our first work cycle. The students have started learning about the five layers of the atmosphere. We had a fun time correcting our grammar editing by using an old school overhead projector. The incorrect sentences were projected onto our white board and the students took turns correcting them. They continue to write in their journal each day. Our writing has also included writing prompts that will be a part of their writer's notebook.

A couple of reminders:
Students may want to bring an extra mask in case theirs get too sweaty.

Students need some type of headphone/earbuds with a microphone in order to participate in some lessons.

Each morning we start our class meeting off with a math challenge. Can you come up with the answer 24 by using addition, subtraction, multiplication, and/or division? The second problem can be solved using exponents too!

1 2 5 9

2 2 3 5
